Summary

Java Backend / Full-Stack Developer fresher (B.Tech CSBS, 2027) with a Java Developer internship building Spring Boot REST APIs and multi-tenant PostgreSQL schemas with Liquibase migrations. Built and deployed a Spring Boot, JPA and MySQL inventory application, plus JWT/RBAC-secured services and ML-backed media analysis. Strong in OOP, SQL and DSA, with 150+ LeetCode problems solved in Java and SQL.

Education

B.Tech in Computer Science and Business Systems Rajalakshmi Institute of Technology, Chennai, India | CGPA: 8.15 **2023-2027**

XI, XII - Tamilnadu Board Good Luck Higher Secondary School, Mayiladuthurai **2021-2023**

Skills

Languages: Java (Core and Advanced), SQL, Python
Backend: Spring Boot, REST APIs, Spring Data JPA (Hibernate), Spring Security, JWT, RBAC, Bean Validation, FastAPI, Maven
Databases: MySQL, PostgreSQL, Redis, Liquibase (schema migrations)
Tools & Cloud: Git, GitHub, Docker, Postman, Linux, AWS (EC2, S3 – basics), React
Core CS: Data Structures and Algorithms, Object-Oriented Programming (OOP), DBMS, Operating Systems, Computer Networks, Debugging

Internship Experience

Java Developer Intern – Precision Infomatics (M) Pvt. Ltd. **2025-2026**

- Engineered RESTful APIs and scalable backend services using Java and Spring Boot to support enterprise business workflows and application integration.
- Designed and maintained multi-tenant PostgreSQL database schemas to keep data isolated and consistent across tenants.
- Managed version-controlled database migrations with Liquibase, ensuring data consistency and reliable deployments.

  Tech: *Java, Spring Boot, REST APIs, PostgreSQL, Liquibase, Git*

Quantum Computing Intern – Rajalakshmi Institute of Technology **2025**

- Built a security-focused browser in Python using Post-Quantum Cryptography (Kyber, Dilithium) for quantum-resistant key exchange and digital signatures against future quantum decryption threats.

Projects

Inventory Management System – Small Retail Shop **2026**

- Developed a Spring Boot inventory management application with separate admin and customer access to manage products, stock levels and inventory operations on MySQL.
- Implemented CRUD functionality, RESTful APIs and Spring Data JPA (Hibernate) persistence, with Spring Security password hashing (BCrypt), Bean Validation and Liquibase-managed schema migrations.
- Containerized with Docker and deployed live on Render.

  Tech: *Java 21, Spring Boot, Spring Data JPA, Spring Security, MySQL, Liquibase, Thymeleaf, Maven, Docker*
  GitHub: github.com/Vishwa21082006/Inventory | **Live:** inventory-c7vi.onrender.com

FakeBuster AI – Deepfake Forensics Platform **2026**

- Developed a full-stack deepfake detection platform with a FastAPI backend, React frontend, PostgreSQL and Redis to identify AI-generated fake media using forensic analysis and machine learning.
- Implemented image and video analysis pipelines with JWT authentication, role-based access control (user / analyst / admin), Redis rate limiting, ClamAV malware scanning of uploads and secure REST APIs with health and readiness endpoints.

  Tech: *FastAPI, React, PostgreSQL, Redis, JWT, RBAC, ClamAV, Docker Compose*
  GitHub: github.com/Vishwa21082006/Fakebusterai

Campus Registry System – StudentSync **2026**

- Built a Spring Boot and MySQL college management backend covering students, classes, subject enrollment and library book allotment, with Liquibase-managed schema and Spring Data JPA.
- Designed a multi-database synchronization approach for consistent data exchange across multiple institutional servers, and added a configuration-driven feature toggle (V1/V2) for safe rollout and instant rollback.

  Tech: *Java 17, Spring Boot, Spring Data JPA, MySQL, Liquibase, Maven, JavaScript*
  GitHub: github.com/Vishwa21082006/CampusRegistry-Backend

C0-PQLink / Q-Puncture-205 – Post-Quantum Secure Sessions for IoT **2026**

- Implemented a post-quantum live-session protocol for constrained IoT devices in C/C++ and native MicroPython, using ML-KEM-512 key encapsulation and Ascon-AEAD128 encrypted records with a PSK-authenticated handshake.
- Built power-fail-safe migration with a one-way policy state and authenticated two-slot journal for torn-write recovery; validated through cross-language interoperability, packet-loss and AddressSanitizer/UBSan tests.

Achievements

- **Quantothon International Hackathon Finalist** – Developed a Post-Quantum Cryptography (PQC) solution. **2026**
- **Amazon Machine Learning Hackathon 2025** – Secured AIR 776 among 80,000+ participants by developing a LightGBM model. **2025**
- **LeetCode** – 150+ problems solved in Java and SQL; 50 Days and 100 Days Badges 2026. **2026**
- **Emerging Leader Award - Anandham Youth Foundation** – Honored for leading teams and fostering effective collaboration. **2025**
